

ST0501 FRONT-END WEB DEVELOPMENT

INDIVIDUAL CA2 REFLECTION JOURNAL

Student Name: Nur Syarah

Admin Number: 2634874

Class: DCITP/01/1A/11

Group No: 6

Objective :

This Reflection Journal requires you to critically analyze your CA2 project decisions, technical issues, and your responsible use of AI tools. Tutors are looking for depth of thought and examples that demonstrate understanding of your work.

Instructions:

- Answer all 3 parts below
 - Total word count : 900-1200 words
 - Use examples from your CA2 or class activities where relevant
 - Submitted **individually** via BrightSpace.
 - Attach your AI prompt logs using the Academic Integrity Declaration link (available in BrightSpace) in Appendix, this will **not** be included in the wordcount.
-

Part 1: Reflection on Styling Frameworks & Interactivity

1. *What changes are made to the original plan? Why are the changes necessary? And what impact do they cause e.g on the website, user experience, performance etc?*
2. *Analyze the trade-offs between using a front-end styling framework (e.g., Bootstrap/Tailwind) and writing custom CSS in your project. How did your choice affect the efficiency, design flexibility, or maintainability of your website?*
3. *Evaluate one interactive feature (e.g., form validation, DOM update, dynamic menu) you implemented: How well does it improve user experience? If you had to enhance it further, what changes would you make and why?*

Word Count Suggestion: 250-450 words.

I planned to make some of the pages more interactive by adding a 'filter' function where users can click buttons and apply filters to the list of food items

Part 2: Reflection on JavaScript & DOM Interactivity

- 1. What changes are made to the original plan? Why are the changes necessary? And what impact do they cause e.g on the website, user experience, performance etc?*
- 2. Which JavaScript feature you added (e.g., image gallery, menu toggle, validation) made the biggest impact on your website's user experience? Why?*
- 3. Think about the form you created in CA2 or practiced in class: What makes a form easy or hard for users to complete? What is one improvement you would suggest making a form more user-friendly, and why?*

Word Count Suggestion: 250-450 words. (Write your answer here)

Part 3: Reflection on AI Usage and Evidence of Understanding

- 1. Analyze your use of AI during this project: Which specific problem or task did AI help you with, and why did you choose to use AI for it?*
- 2. Choose one example where you used AI to help with coding for your website. Show the original AI-generated snippet and your modified version. Explain what you changed and why. How did your changes make the code better or fit your project needs?*

Word Count Suggestion: 250-450 words. (Write your answer here)

Appendix *(e.g AI outputs or evidences you would like to include, this will not be included in the wordcount)*

~~ The End ~~
